AutoSpec Technologies Pty Ltd  
235 Ernest Street  
MANLY QLD 4179

**Attention: Tim Stimson**

Dear Sir,

We first became aware the AutoSpec system early in 2009 and had the opportunity to comment on the prototype. Subsequently we were pleased to be among the first practices in Australia to have access to the system.

The manufacturers/suppliers already on the system provide their technical expertise guiding us through their product ranges ensuring that only a fit for purpose selection can be made. This is done without the need to refer to separate websites or interrogate product datasheets and brochures saving a significant amount of time, eliminating errors, resulting in concise and accurate specifications for their products.

Once the product is selected the document production functions generate a detailed description of the item which can be transferred as notes for drawings, set out in schedules or embedded in full specification sections. This flexibility makes integration into our present documentation straightforward.

Photos, drawings and datasheets are available when I want to refer to them as are the contact details of each manufacturer. Knowing that the manufacturers update their information on an ongoing basis makes their AutoSpec digital libraries extremely reliable.

I would suggest that any manufacturers who want to help building designers accurately select and specify their products should consider working with AutoSpec.

Yours faithfully,
